Arkansas Least Change Plan.zip

State
Arkansas

### Legislative
U.S. House

Added to PlanScore
Oct. 14, 2021

This plan has 4 seats. Fairness metrics for plans with fewer than seven seats should be interpreted with great caution.

PlanScore bases its scores on predicted precinct-level votes for each office (State House, State Senate, and U.S. House) built from past election results and U.S. Census data. More information about the predictive model used to score this plan.
Charts and Graphs

Efficiency Gap: 17.1%

The Plan Library is live!

See proposed plans from across the country

This Plan

+25% D   Balanced   +25% R
Votes for Republican candidates are expected to be inefficient at a rate 17.1% lower than votes for Democratic candidates, favoring Republicans in 89% of predicted scenarios.[*] Learn more ❯

Sensitivity Testing

Possible Vote Swing

Sensitivity testing shows us a plan's expected efficiency gap given a range of possible vote swings. It lets us evaluate the durability of a plan's skew.

Declination: 0.32

This Plan

+0.81 D   Balanced   +0.81 R
The mean Democratic vote share in Democratic districts is expected to be higher than the mean Republican vote share in Republican districts. Along with the relative fraction of seats won by each party, this leads to a declination that favors Republicans in 67% of predicted scenarios.[*] Learn more ❯

Partisan Bias

The parties' statewide vote shares are 41.6% (Democratic) and 58.4% (Republican) based on the model. Partisan

bias is shown only where the parties' statewide vote shares fall between 45% and 55%. Outside this range the
See proposed plans from across the country
metric's assumptions are not plausible.

Mean-Median Difference

The parties' statewide vote shares are 41.6% (Democratic) and 58.4% (Republican) based on the model. The

mean-median difference is shown only where the parties' statewide vote shares fall between 45% and 55%.

Outside this range the metric's assumptions are not plausible.

Freedom to Vote Act Races

Section 5003(c)(3) of the FTVA specifies that partisan fairness should be assessed using a state's two most recent elections for U.S. President and two most recent elections for U.S. Senate.

U.S. President 2020: 21.6%

Under this plan, votes for the Republican candidate were inefficient at a rate 21.6% lower than votes for the Democratic candidate.

U.S. President 2016: 21.4%

Under this plan, votes for the Republican candidate were inefficient at a rate 21.4% lower than votes for the Democratic candidate.

U.S. Senate 2020: 16.9%

Under this plan, votes for the Republican candidate were inefficient at a rate 16.9% lower than votes for the Democratic candidate.

U.S. Senate 2016: 25.4%
