Maryland

**Legislative**

U.S. House

**Added to PlanScore**

Nov. 22, 2021

PlanScore bases its scores on predicted precinct-level votes for each office (State House, State Senate, and U.S. House) built from past election results and U.S. Census data. [More information about the predictive model used to score this plan.](#)

## Charts and Graphs

**Efficiency Gap: 3.0% D**

+25% D                      Balanced                      +25% R

### The Plan Library is live!

Votes for Democratic candidates are expected to be inefficient at a rate 3.0% D lower than votes for Republican candidates, favoring Democrats in 65% of predicted scenarios.\* [Learn more](#) >

## Sensitivity Testing

Sensitivity testing shows us a plan’s expected efficiency gap given a range of possible vote swings. It lets us evaluate the durability of a plan’s skew.

## Declination: 0.11 D

The difference between mean Republican vote share in Republican districts and mean Democratic vote share in Democratic districts along with the relative fraction of seats won by each party leads to a declination that favors Democrats in 70% of predicted scenarios.\* [Learn more](#) >

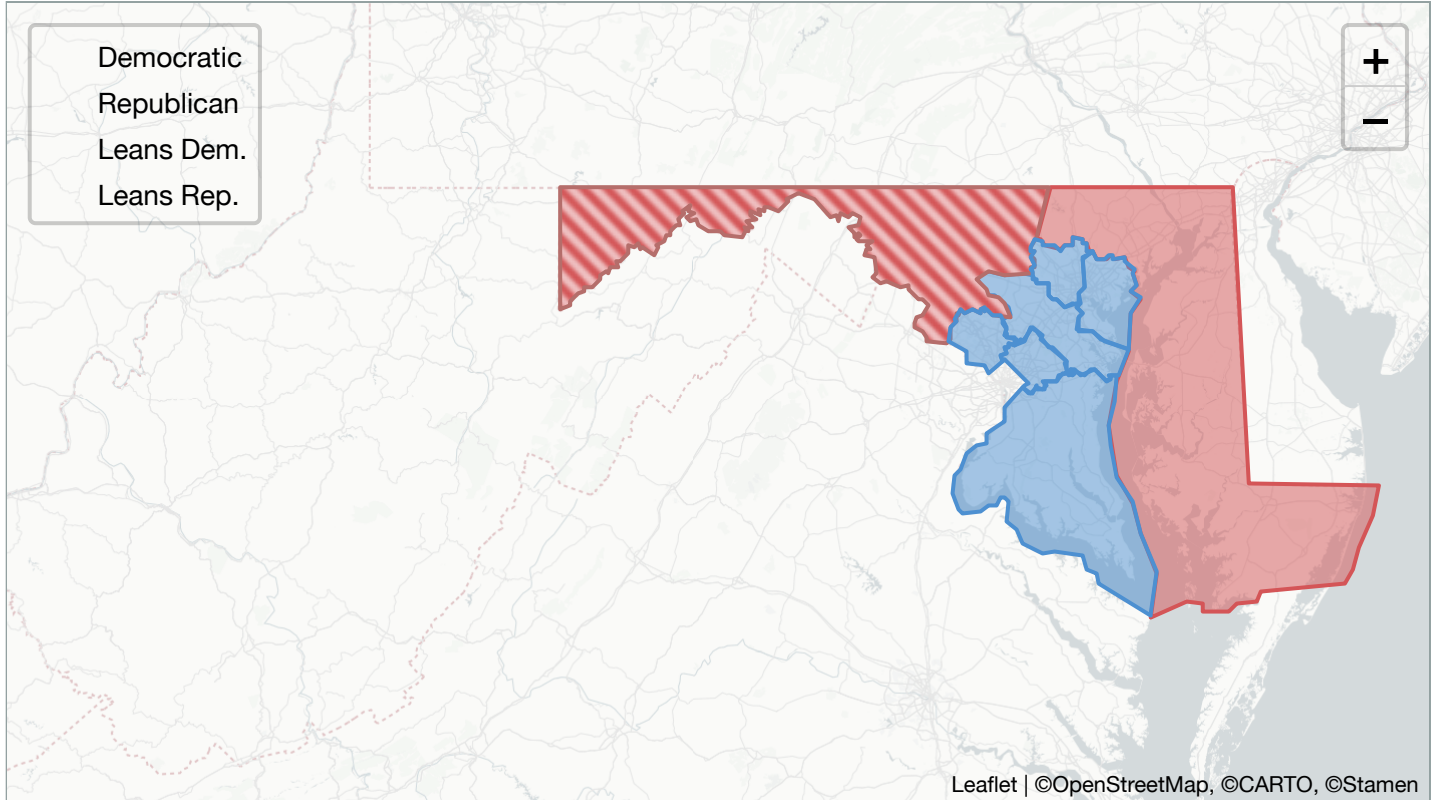

## Partisan Bias

The parties’ statewide vote shares are 62.0% (Democratic) and 38.0% (Republican) based on the model. Partisan bias is shown only where the parties’ statewide vote shares fall between 45% and 55%. Outside this range the metric’s assumptions are not plausible.

## Mean-Median Difference

The parties' statewide vote shares are 62.0% (Democratic) and 38.0% (Republican) based on the model. **The Plan Library is live!** mean-median difference is shown only where the parties' statewide vote shares fall between 45% and 55%. See proposed plans from across the country. Outside this range the metric's assumptions are not plausible.

## Freedom to Vote Act Races

Section 5003(c)(3) of the FTVA specifies that partisan fairness should be assessed using a state's two most recent elections for U.S. President and two most recent elections for U.S. Senate.

### U.S. President 2020: 9.1% R

Under this plan, votes for the Republican candidate were inefficient at a rate 9.1% R lower than votes for the Democratic candidate.

### U.S. President 2016: 3.0% R

Under this plan, votes for the Republican candidate were inefficient at a rate 3.0% R lower than votes for the Democratic candidate.

### U.S. Senate 2018: 11.3% R

Under this plan, votes for the Republican candidate were inefficient at a rate 11.3% R lower than votes for the Democratic candidate.

## U.S. Senate 2016: 1.1% R

### The Plan Library is live!

Under this plan, votes for the Republican candidate were inefficient at a rate 1.1% R lower than votes for the See proposed plans from across the country.  
Democratic candidate.

\* Scenarios are part of the predictive model used to score this plan.

† 50%+ chance of one or more party flips assuming the plan is used for one decade with five State House elections, five U.S. House elections, or three State Senate elections.

‡ Enacted U.S. House, State House, and State Senate plan metrics are featured in our historical dataset.

PlanScore is a project of Campaign Legal Center.
